

Comprehensive IT Solutions from UPnetworkx That Up-Level Your Network's Performance and Protection

UPnetworkx delivers a full suite of IT solutions, powered by AT&T, that help companies boost their computing infrastructure in all the most important ways—today and into the future. From industry-leading voice and data solutions to cybersecurity measures and networking monitoring, UPnetworkx keeps your network running at its peak and well-protected. We are your local team of business technology experts with full access to AT&T's worldwide resources.

UPnetworkx Solutions with AT&T

Wireless Wide Area Network (WWAN) Put cellular service to work nearly anywhere. This cost-effective data solution keeps your team connected and transactions processing in locations where other wireline connections are lacking—or fail during power outages. WWAN provides flexibility, diversity, and consistency as a primary or failover connection.

Software-Defined Wide Area Network (SD-WAN) Build a more agile, optimized network, streamline deployment, and reduce redundant hardware and unnecessary on-ramp costs with SD-WAN. It's easy to set up and scale up, maintain, and customize—and connects your entire network across locations with future-proof business technology that's built for the cloud.

MPLS Multiprotocol Label Switching (MPLS) is a sophisticated, hardware-based solution that directs your network traffic—and fully integrates multiple voice, data, and video networks with any-to-any connectivity. Excellent for organizations with specific security and connectivity requirements, with a single high-performing, highly secure, scalable IP-based network.

Internet Access Get always-on connectivity with improved data security, and stay in touch with internal and external contacts quickly and easily. Company devices access AT&T's trusted IP backbone via Wi-Fi modem or router connected to a DSL network, with flexible speed options up to 24 Mbps.

Cloud Services Respond to changing business demands with ease. Our cloud services provide tremendous flexibility and network accessibility, with AT&T network reliability, security, and upload/download speeds your applications demand. Services include cloud computing, cloud storage, an app development platform with convenient "as a service" features, and disaster recovery.

Cybersecurity No organization that stores sensitive data can afford to be a victim of cybercrime. Our cost-effective managed cybersecurity solutions provide proactive network safeguards to reduce risk and corporate harm. Multi-layered security avoids unauthorized network access; flexible deployment options cover on-premises or cloud applications.

Additional Services

UPnetworx Clarity and UPnetworx NOC UPnetworx Clarity provides a clear view into your network's performance, with secure user access and infrastructure management. Through our 24/7/365 UPnetworx NOC—a multi-carrier, multi-technology data center—we can co-manage any portion of your infrastructure. Get real-time monitoring and alerts, advanced reporting, and more that enhance your operation.

IT Consulting Our team of engineers and telecom professionals help you solve your IT challenges and manage your growing needs. From developing and executing your strategic IT plan to system upgrades to cloud migration, we help you derive maximum value from your biz tech.

UPnetworx at a Glance

We make it easy for our customers to do business with AT&T, delivering powerful, comprehensive network solutions for national and global business customers with the personalized touch of a small local business. Our partnership with AT&T means you'll gain efficiencies like simplified ordering and consolidated network and billing solutions, and have access to AT&T network design and cloud, data, and voice solutions.
